

Flutter Software Developer

The United States or Canada | Remote

DFnet is a diverse, purpose-driven, technology-focused, global team. We have an extensive service offering, and comprehensive eClinical software. We bring more flexibility, better data quality, and greater efficiency to clinical trials everywhere in the world.

We are a distributed team with offices/hubs in Hamilton ON, Seattle WA, and Johannesburg SA. We use a variety of communication tools to stay connected while working remotely.

We are looking for a talented Software Developer with a natural flair for front-end development. This thorough, driven individual will join us in the early stages of our Flutter development journey. They will be an integral part of the evolution of DFdiscover, our eClinical software.

The Opportunity

- Work with a forward-thinking team to develop new applications, and transition existing applications to Flutter
- Shape the future of the company by continuing the transition to DevOps

Must-haves

- 3+ years of professional software development experience
- 1+ year building applications in Flutter
- Experience writing automated tests
- Hands-on, practical experience with DevOps
- Bachelor's in computer science or demonstrated equivalent industry experience
- Ability to work independently, anticipate problems, and solve them with little guidance
- Communicative with ideas, questions, and concerns
- Thrive and succeed in a fast-paced environment where you must explore options, learn new concepts quickly, and contribute to simultaneous projects

- High degree of specialized expertise and skill in maintaining established standards of quality and accuracy

Nice-to-haves

- Experience building great user interfaces
- Experience developing iOS and Android applications
- Involvement in developing software for regulated industries
- Self-directed and motivated learner

About DFnet

We have been building software and delivering services for over 20 years to help clients achieve their single most important aim – to get their innovations to market faster and make an impact on global health.

Our software and solutions leverage the most current technologies and most efficient practices to give every kind of organization the tools and support they need to run efficient global trials at every phase.
